

COOLING TOWER GEARBOX PROTECTION KIT

A Filtration and Sampling Solution to Reduce Oil Changes and Downtime Risks

You no longer have to live with fear of the unknown inside your cooling tower gearbox. Trico's kit is designed to remove the mystery by facilitating ongoing oil sampling and filtering – instead of only at shutdown. As a result, you can reduce oil changes and avoid repairs that can run a minimum of \$50,000. It's a low-cost solution to the high-cost problems of repairs, replacements and unplanned downtime.

A power plant operator that implemented this kit on 13 cooling tower gearboxes cut gearbox oil particle counts to below industry ideal cleanliness targets.
